DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1, 4-9, 12-15, 31, 32 and 37, drawn to a system for accessing electronic books reciting a file server storing e-books, a controller coupled with the file server for controlling access to the electronic books on the file server, the controller retrieving selected e-book and sending the selected e-book to an electronic viewer, the electronic viewer storing the selected electronic book in an encrypted and compressed form and utilizing a secure microprocessor that decrypts and decompresses the encrypted and compressed e-book only at the time of display as recited in claims 1 and 13, classified in class 709, subclass 229.

II. Claims 16-20, 22-25, 27-29, and 33 drawn to viewing e-book and/or distributing e-book from a vendor to a purchaser by utilizing a viewer to store a selected e-book until the e-book is read once, wherein the electronic book is automatically erased after being read once; until a predetermined period of time has passed, wherein the electronic book is automatically erased after the predetermined period of time has passed, and permanently, wherein the electronic book is not automatically erased as recited in claims 16 and 24, classified in class 726, subclass 27 & 31.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination II has separate utility such as a viewer storing a selected e-book until the e-book is read once, wherein the electronic book is automatically erased after being read once; until a

predetermined period of time has passed, wherein the electronic book is automatically erased after the predetermined period of time has passed, and permanently, wherein the electronic book is not automatically erased. See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Restriction for examination purposes as indicated is proper because all these inventions listed in this action are independent or distinct for the reasons given above and there would be a serious search and examination burden if restriction were not required because one or more of the following reasons apply:

- (a) the inventions have acquired a separate status in the art in view of their different classification;
- (b) the inventions have acquired a separate status in the art due to their recognized divergent subject matter;
- (c) the inventions require a different field of search (for example, searching different classes/subclasses or electronic resources, or employing different search queries);
- (d) the prior art applicable to one invention would not likely be applicable to another invention;

(e) the inventions are likely to raise different non-prior art issues under 35 U.S.C. 101 and/or 35 U.S.C. 112, first paragraph.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected invention.

If claims are added after the election, applicant must indicate which of these claims are readable upon the elected invention.

Should applicant traverse on the ground that the inventions are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

This restriction requirement is necessitated by the amendment made to the claims filed on 05/01/2008.
